

Blind Rivet for Construction Machinery

This blind rivet is designed for robust fastening in construction machinery applications. It features a durable shank and a flared head for secure and reliable joining of materials.

Product Overview

Robust Fastening Solution

This blind rivet is specifically engineered for high-stress environments typical in construction machinery. Featuring a durable shank and a flared head, it ensures secure and reliable joining of heavy-duty materials. Its design prioritizes structural integrity, making it an ideal choice for components that require strong, vibration-resistant connections.

Technical Features

Fastening Type	Blind Rivet
Primary Application	Construction Machinery, Heavy-duty Assembly, Vibration-resistant joints

Design Characteristics

Key Design Benefits

- Durable shank construction
- Flared head for secure fastening
- Vibration-resistant performance

Head Style	Flared Head
