

# Blow Molding Machine

This blow molding machine is designed for manufacturing plastic products. It is engineered for precision, efficiency and durability, making it suitable for high-volume production environments.

## Product Overview

### PTB70 Series Efficiency

The PTB70 series is a high-performance industrial blow molding machine designed for manufacturing plastic products with precision and durability. Engineered for high-volume environments, this machine features a robust clamping system and precise temperature controls for consistent quality. Its compact design optimizes floor space while energy-efficient operation helps reduce overall production costs.

## Technical Capabilities

### Production Output

**100 units/h**

Output Rate

### Maximum Bottle Capacity

5 L

## Features

### Core Advantages

- Robust clamping system
- Precise temperature controls
- User-friendly interface
- Energy-efficient operation
- Compact floor-space utilization
