

Blower Rice Polisher

This machine is designed for efficient rice processing. It uses a polishing mechanism and an integrated blower to separate chaff and impurities.

Overview

High-Efficiency Rice Processing

The Blower Rice Polisher is a robust, compact machine engineered for professional-grade rice processing facilities. Its efficient design features an integrated motor and belt-driven polishing mechanism, complemented by a specialized blower system for the effective separation of chaff and impurities. The unit is constructed from durable materials to ensure longevity and reliable performance in demanding environments.

Design and Build

Structural Features

- Compact and space-saving structure
- Durable heavy-duty construction
- Integrated blower for impurity removal
- Reliable motor and belt-driven system

Finish and Aesthetic

Green and Blue color scheme, Modern industrial design

Operational Information

Operational Characteristics

- Convenient and intuitive operation
- Consistent grain polishing capability
- Effective separation of chaff
