

Blowout Preventer Transporter

This heavy-duty transporter is designed for the safe and efficient movement of large and heavy BOP stacks. It features a robust steel frame, multiple support points for stability, and a modular design for easy transport and assembly.

Product Overview

Heavy-Duty BOP Transporter

This heavy-duty Blowout Preventer (BOP) transporter is engineered for the safe and efficient movement of large, heavy BOP stacks in demanding drilling environments. Featuring a robust steel frame construction and a modular design, it ensures stability through multiple support points while allowing for ease of transport and assembly. Designed to meet rigorous industry safety standards, this equipment is an essential solution for both onshore and offshore drilling operations.

Technical Specifications

Safety Compliance

Industry Safety Standards Compliant

Frame Material	Robust Steel
Design Features	Modular Design, High Load Capacity, Multiple Support Points

Operational Use

Suitable Environments

- Onshore Drilling
- Offshore Drilling

Primary Function	Safe and efficient movement of large and heavy BOP stacks
