

Blue Freight Boxcar with Sliding Door

This blue boxcar is an enclosed railroad car designed for freight transport. It is equipped with a sliding door to facilitate the loading and unloading of cargo.

Product Overview

Robust Freight Transport

This blue boxcar is designed for the efficient transport of diverse freight across railway networks. Engineered with vertical body ribs to ensure high structural rigidity and strength, the unit is built to withstand the demands of heavy-duty operations. The integrated sliding door mechanism provides streamlined access for loading and unloading, while the precision-engineered undercarriage and suspension system ensure stability during transit.

Technical Details

Body Style	Boxcar
Door Configuration	Sliding door
Design Features	Vertical Ribbing, Enclosed Body, Suspension System

Identification

Unit Identification	P-001
