

Bluetooth Audio Transmitter Receiver with Docking Station

Bluetooth transmitter and receiver with docking station for versatile audio connectivity. It transmits audio from non-Bluetooth devices to Bluetooth headphones or speakers, and receives audio from Bluetooth sources and outputs it to non-Bluetooth devices.

Overview

Versatile Bluetooth Connectivity Solution

This compact Bluetooth audio transmitter and receiver with an integrated docking station is designed to provide seamless wireless connectivity for your home audio setup. It allows users to easily transmit audio from non-Bluetooth devices to wireless headphones or receive audio from mobile devices for output through traditional stereo systems. With its dedicated TX/RX toggle switch and minimalist design, it offers a professional and convenient solution for modernizing legacy audio equipment.

Core Functionality
