

Boiler Circulation Pump for Heating Systems

This boiler circulation pump is engineered for efficient heat distribution in domestic heating systems. Its durable construction and corrosion-resistant components ensure long-lasting and quiet operation.

Product Overview

High-Efficiency Boiler Circulation Pump

This boiler circulation pump is specifically designed for domestic heating systems, ensuring optimal heat distribution throughout your infrastructure. It features a robust construction with a durable motor and corrosion-resistant components for long-lasting performance. With its self-lubricating ceramic shaft, the unit operates quietly and reliably, making it an excellent choice for various boiler configurations.

Technical Specifications

Noise Level

45 dB

Noise Output

Design Features

Self-lubricating, Ceramic shaft, Corrosion-resistant, Long-life design

Installation

Installation

Directly in the boiler system
