

Bottle Forming Mold

Precision-engineered for high-volume bottle manufacturing. It is constructed from durable materials ensuring consistent bottle formation and compatibility with standard equipment.

Overview

Precision Bottle Forming Solutions

This precision-engineered bottle mould is designed for high-volume manufacturing environments, offering robust construction for consistent, long-term performance. Featuring a multi-cavity design, it significantly increases production efficiency while ensuring uniform bottle dimensions and high-quality surface finishes. The mould is fully compatible with standard bottle manufacturing equipment, making it a reliable tooling solution for diverse production requirements.

Technical Details

Design Features

- Multi-cavity design
- Precision-engineered cavities
- High-durability construction
- Standard equipment compatibility

Model Identifiers

010 114

Material Composition

Hardened Steel, Brass

Performance

Production Capabilities

1 High

Surface Finish Quality

1 High

Volume Capability
