

Brake Chamber Spring for Automotive Brake Systems

This brake chamber spring is designed for optimal performance and durability in automotive braking systems. The spring is engineered to provide consistent force and reliable operation, ensuring efficient brake chamber function.

Product Overview

High-Performance Brake Chamber Spring

This high-quality brake chamber spring is engineered for optimal performance and durability within automotive braking systems. Designed to withstand demanding conditions, it provides consistent force and reliable operation to ensure efficient brake chamber function. Constructed from robust materials, this component maintains structural integrity over extended use, making it an essential part for reliable brake maintenance.

Compatibility

Compatible Brake Chamber Types

- 24DD
- 24DP
- 30DD
- 30DP

Technical Specifications

Performance Features

High stress resistance • Consistent force • Precision-engineered

Material

High-quality spring steel, Durable construction
