

Brake Master Cylinder Assembly

This brake master cylinder assembly converts mechanical force from the brake pedal into hydraulic pressure to apply the brakes. It is typically constructed from cast iron or aluminum and includes a reservoir for brake fluid, internal pistons, and seals.

Product Overview

Brake Master Cylinder Assembly

The M4074 brake master cylinder assembly is an essential component designed to convert mechanical force from the brake pedal into hydraulic pressure, ensuring reliable braking performance. This assembly features a robust construction and includes a reservoir for brake fluid, along with internal pistons and seals for consistent operation. It is engineered specifically for compatibility with select Cadillac vehicle models.

Identification

Item Number	M4074
OE Number	M4074

Compatibility

Compatible Vehicles

- 2004 Cadillac Truck Escalade AWD

Technical Details

Core Function

Hydraulic Pressure Conversion • Brake System Component
