

Brake Motor for Industrial Machinery

This brake motor features high efficiency, low noise, and minimal vibration. It is designed for high reliability and long operational life.

Overview

High-Performance Brake Motor

This brake motor is engineered for industrial machinery applications that demand precise stopping power and reliable operation. Featuring a robust construction, it is built to withstand demanding environments while providing immediate load holding. With versatile power options and high efficiency ratings, this motor ensures both operational safety and accuracy for critical equipment.

Technical Specifications

Frame Size Model	63-250
Input Power Range	0.12 - 45 kW
Efficiency Standards	IE2, IE3
IE3 Efficiency Scope	0.75 - 45 kW
