

Brake Rotor and Drum Resurfacing Machine

This professional brake center is designed for resurfacing brake rotors and drums. It features a robust lathe mechanism with adjustable cutting tools and a variable speed motor.

Overview

Precision Brake Resurfacing Solution

The Professional Brake Center is a precision machine engineered for the efficient resurfacing of brake rotors and drums. Featuring a robust lathe mechanism with adjustable cutting tools and a variable speed motor, it ensures optimal material removal for high-quality results. Designed for versatility, the unit includes a comprehensive set of adapters and accessories to service a wide range of vehicle makes and models.

Key Features

Model Number	C9370
Capabilities	Brake Rotor Resurfacing, Brake Drum Resurfacing, Variable Speed Control

Design & Construction

Build Quality

Sturdy Construction • Precision Lathe Mechanism • Integrated Storage

Operational Enhancements

- Integrated work light for enhanced visibility
- Adjustable cutting tools
- Variable speed motor
- Organized tool storage compartments
