

Brass Filling Valve for HVAC&R Systems

This brass filling valve is designed for HVAC&R systems. It features a pressure adjustment mechanism for precise control and threaded connections for secure, leak-proof installation.

Overview

About the Automatic Filling Valve

This automatic filling valve is engineered for sealed heating systems, designed to maintain stable system pressure automatically. It allows for pre-adjustment of the pressure value before installation, ensuring precise operation during the filling phase. Once the set pressure is reached, the valve automatically halts the feed to prevent over-pressurization.

Technical Specifications

Max Inlet Pressure	12 bar
Pressure Setting Range	0.2-4 bar
Factory Pressure Setting	3 bar
Indicator Accuracy	±0.15 bar
Max Working Temperature	65 °C
Pressure Gauge Range	0-6 bar

Construction & Compliance

Primary Material	Brass
Certifications	CE, ISO
Compatible Medium	Water
