

Brass Foil Strip for Radiator Tube

This brass foil strip is designed for radiator tube applications. It offers excellent thermal conductivity and corrosion resistance for optimal performance in heat transfer systems.

Product Overview

High-Performance Brass Foil

This high-quality brass strip, specifically designed as foil for radiator tubes, provides exceptional thermal conductivity and corrosion resistance. Engineered for reliability, it ensures optimal performance in critical heat transfer systems. Its precise material composition makes it an ideal choice for manufacturing efficient and durable radiator components across various electronic and industrial applications.

Technical Specifications

Primary Application

Radiator Tubes • Heat Exchangers • Industrial Heat Dissipation

Material Grade	H6501
Key Properties	High Thermal Conductivity, Corrosion Resistant, High Precision
