

Brass Foil Strip for Radiator Tubes

This brass foil strip is designed for radiator tube applications. The material ensures optimal performance and compatibility with various radiator tube designs due to its precise thickness tolerances.

Product Overview

High-Performance Brass Foil Strip

This high-quality brass strip (foil) is specifically engineered for radiator tube applications, offering excellent thermal conductivity and reliable corrosion resistance. Its precise manufacturing ensures optimal performance for efficient heat transfer in demanding environments. Designed for versatility, this material is suitable for a wide range of automotive, industrial, and HVAC radiator systems.

Technical Specifications

Key Material Properties

- Excellent thermal conductivity
- High corrosion resistance
- Precise thickness tolerances

Primary Applications

Automotive Radiators, Industrial Cooling, HVAC Systems

Model Identifier

dld02
