

Brass Pipe Connector

These brass pipe connectors are designed for joining pipes and tubes in various plumbing and industrial applications. They are constructed from durable brass, ensuring corrosion resistance and a secure connection.

Product Overview

Precision Brass Connectors

These brass pipe connectors are engineered for reliability in industrial fluid and gas handling systems. Each unit is machined using digital lathe processes to ensure consistent dimensions and threaded accuracy. Designed for durability and corrosion resistance, these components are suitable for diverse plumbing, HVAC, and pneumatic applications.

Manufacturing Standards

Quality Assurance

- Machined by Digital Lathe
- Each dimension checked by standard gauge
- Threads verified by standard gauge

Customization & Services

Custom drawings accepted, Sample prototyping available, Free mould and tooling

Technical Specifications

Key Dimensions & Features

20 mm

Diameter

0.125 inch

Thread Size

Material & Application

Feature	Detail
Material	High-quality Brass
Primary Benefit	Corrosion Resistance
Common Usage	Fluid, Gas, HVAC, Pneumatic
