

Brass Pressure Relief Valve with Thermoplastic Top

These pressure relief valves are designed to protect pressure vessels and piping systems from overpressure. The valves are constructed from brass and feature a yellow thermoplastic top.

Product Overview

Reliable Pressure Protection

The Series 7000 pressure relief valves are engineered to safeguard pressure vessels and piping systems against overpressure conditions. Constructed from high-quality brass and featuring a durable yellow thermoplastic top, these valves provide a robust solution for industrial fluid management. Each unit includes an integrated pull ring, allowing for convenient manual override and system testing.

Technical Specifications

Material Construction	Brass Body, Thermoplastic Top
Manual Override	Yes

Model Variants

Available Models

Model Number	Connection Size
7001	1/4"
7002	3/8"
7003	3/4"
