

Brass Radiator Tube Strip

This brass strip is designed for use in radiator tube applications. It offers excellent thermal conductivity and corrosion resistance for demanding heat transfer needs.

Product Overview

Precision-Engineered Brass Radiator Strip

This high-quality brass strip, often referred to as foil, is specifically engineered for radiator tube manufacturing. It provides exceptional thermal conductivity and corrosion resistance, making it an ideal choice for demanding heat transfer applications. Precision-manufactured to tight tolerances, this material ensures consistent performance and reliability for automotive, HVAC, and industrial radiator systems.

Material Properties

Key Features

High Thermal Conductivity • Corrosion Resistant • Precision Formability • Tight Tolerances

Material Composition

Brass

Key Applications

Automotive Radiators, HVAC Systems, Industrial Heat Exchangers

Specifications

Form Factor

Strip / Foil
