

Brass Y-Strainer for Fluid Filtration

This Y-strainer is designed for filtering debris and impurities from fluids in plumbing systems, suitable for industrial and residential use. Constructed from brass, it features threaded connections for easy installation and protects downstream equipment by removing particles.

Overview

Industrial-Grade Brass Y-Strainer

This high-quality brass Y-strainer is specifically engineered to filter debris and impurities from fluid lines, ensuring the longevity of your industrial or residential plumbing systems. Designed to protect downstream equipment, it effectively removes harmful particles from water, oil, and gas media. Its robust brass construction and threaded connection design allow for seamless integration and simple maintenance routines in various fluid handling applications.

Technical Specifications

Pressure Rating

20 bar

PN Rating

Nominal Diameter

DN15

Features

Material

Brass

Media Compatibility

Water, Oil, Gas

Installation Type

Threaded connection
