

Broaching Tool Set for Metal Shaping

This set features linear broaches with varied tooth configurations and rotary broaches for internal shaping. Constructed from high-speed steel, these tools are suitable for gear cutting and keyway creation.

Overview

Precision Metal Shaping Solution

This comprehensive broaching tool set is engineered for high-precision metal shaping and machining tasks. Constructed from durable high-speed steel, the set offers versatile capabilities including gear cutting and keyway creation. It includes a diverse array of linear and rotary broaches, making it an essential kit for professional metalworking environments requiring reliable, long-lasting performance.

Technical Specifications

Key Applications

- Gear cutting
- Keyway creation
- Internal shaping
- Precision machining

Design Features

Variable tooth density • Multiple configurations • Industrial grade

Material

High-Speed Steel (HSS)

Included Tool Types

Linear Broaches, Rotary Broaches, Internal Broaching Tools, External Broaching Tools
