

Broaching Tool Set for Metalworking

This set features precision broaching tools for creating internal shapes in metal. The assortment includes various broaches with different tooth configurations and sizes for machining splines and keyways.

Product Overview

Precision Broaching Solutions

This comprehensive broaching tool set is engineered for high-precision metalworking applications, enabling the efficient creation of complex internal shapes and profiles. Crafted from high-speed steel, these tools ensure exceptional durability and consistent accuracy during demanding industrial machining tasks. The assortment is specifically designed to handle a variety of geometries, including splines and keyways, making it an essential addition to any professional machine shop.

Technical Specifications

Key Features

- Precision tooth configurations
- High-speed steel construction for durability
- Versatile range of sizes and profiles
- Designed for industrial machining

Material	High-Speed Steel (HSS)
Primary Applications	Internal Keyways, Splines, Complex Geometries, Metalworking
