

Broadcast Color Palette

This color palette is designed for broadcast applications. It provides a range of colors for defining visual elements or signaling different states.

Product Overview

Professional Broadcast Signaling

The Broadcast Color Palette is an essential visual utility designed for radio and television broadcasting environments. Featuring a precise selection of high-contrast vertical stripes including white, gold, red, dark green, dark blue, and orange, it provides a standardized reference for visual calibration. This tool assists in defining graphical elements, signaling specific broadcast states, or managing visual conditions across complex media production systems.
