

Bronze Alloy Bushings

These steel-backed bronze alloy bushings feature solid lubricants for high load capacity and high-speed use. The self-lubricating design ensures maintenance-free operation.

Product Overview

High-Performance Bronze Alloy Bushings

These steel-backed bronze alloy bushings are engineered for demanding industrial environments requiring high load capacity and high-speed operation. The incorporation of solid lubricants within the alloy lining eliminates the need for external lubrication, providing a truly maintenance-free solution. Ideal for heavy-duty applications such as high-speed press dies, these bushings offer exceptional durability and reliable performance.

Technical Specifications

Key Features

- Steel-backed construction
- Solid lubricant lining
- High load capacity
- High-speed application suitability
- Maintenance-free design

Typical Applications

High-Speed Press Dies • Industrial Machinery • Wear-Resistant Assemblies

Material Composition

Bronze Alloy, 10-5-5 Alloy
