

Brown Aluminum Oxide Flap Disc with Plastic Backing

Flap discs are constructed with brown aluminum oxide abrasive, resin-bonded to a plastic backing. These are designed for grinding, blending, and finishing on various materials with angle grinders.

Product Overview

High-Performance Grinding Solution

This brown aluminum oxide flap disc features a robust plastic backing, engineered for efficient grinding, blending, and finishing tasks. The overlapping abrasive flaps ensure consistent material removal rates and an extended service life across various applications. Designed for reliability, it is an ideal consumable for angle grinders in metalworking, woodworking, and construction environments.

Technical Specifications

Compatible Tools

Angle Grinder

Abrasive Material

Brown Aluminum Oxide

Backing Material

Plastic

Application Areas

Metalworking, Woodworking, Construction

Performance Features

Key Performance Attributes

- Consistent material removal
- Extended operational lifespan
- Resin-bonded construction
- Overlapping flap design
