

Brush Roller Component with Keyway

This metallic roller component is designed for machinery applications. It features a central bore with a keyway and cutouts for brushes.

Product Overview

Industrial Brush Roller Component

This precision-machined metallic roller is designed for high-performance industrial machinery applications. Featuring a central bore with an integrated keyway, it ensures secure mounting and reliable rotational movement on power shafts. The specialized outer circumference is engineered with strategic cutouts to accommodate functional elements such as brushes, making it a versatile component for complex mechanical systems.

Mechanical Design

Mounting Configuration	Central bore with keyway
Key Features	Precision Machined, Keyway Integrated, Rotational Stability, Industrial Grade

Material & Construction

Manufacturing Process Machined • Precision Engineered	
Material	Machined Metal

Application Details

Primary Application	Brush roller assembly for industrial machinery
---------------------	--

Technical Identifiers

Internal Marking	US.18
------------------	-------
