

Bucket Elevator Transmission Chain

This is a stainless steel roller chain designed for use in bucket elevators. It is multi-colored and suitable for global export markets.

Product Overview

Specialized Anti-Static Lifting Solutions

This specialized polyester sling is engineered with unique anti-static conductivity properties, designed specifically for sensitive environments such as missile and satellite handling. Unlike standard slings that accumulate static electricity during abrasion, this conductive material safely discharges current to the ground, preventing damage to sensitive electronic and electrical instruments. The design features a wide loading surface to distribute weight effectively while ensuring the protection of tender or delicate objects.

Technical Specifications

Material Type	Special Coated Polyester
Conductivity	Yes
Ply Configuration	Single or Double Ply

Key Features

Key Advantages

- Anti-static conductivity for sensitive electronics
- Wide loading surface for weight distribution
- High strength-to-weight ratio
- Safe for handling tender objects
- Customizable specifications

Protection Options	Anti-abrasion sleeve, Anti-incision protection
--------------------	--

Performance Metrics

Performance Highlights

1 min Ply Options	2 max Ply Options
