

Bucket Wheel Sand Washing Machine

This sand washing machine features a reasonable structure and large capacity for high production. It is designed for efficient sand washing and dewatering with low power consumption.

Product Overview

High-Efficiency Bucket Wheel Sand Washer

This bucket wheel sand washing machine is engineered for high-capacity aggregate processing and sediment removal. Featuring a specialized bucket wheel mechanism, it effectively separates impurities and excess water from sand to ensure superior quality. Its robust construction and low-maintenance drive system provide a reliable solution for construction, mining, and large-scale industrial sand production.

Technical Features

Design Specifications

- Robust steel frame construction
- Large-diameter bucket wheel assembly
- Trapezoidal sedimentation tank
- Electric motor and high-torque gearbox drive

Key Capabilities

Sand Washing, Dewatering, Impurity Separation, Aggregate Processing

Operational Metrics

Performance Highlights

1 Low

Maintenance Level

100 %
