Product Overview

High-Efficiency Sand Washing Solution

The Bucket Wheel Sand Washing Machine is designed for high-performance sand aggregate processing. It utilizes a specialized bucket wheel structure to effectively remove stone powder, silt, clay, and other impurities from sand. This robust equipment ensures consistent quality and purity, making it an essential solution for demanding applications in the mining and construction industries.

Certifications

Quality Standards

ISO 9001, CE, SGS, Bureau Veritas

Operational Details

Primary Function

- Removal of mixed stone powder
- Separation of silt and clay
- Removal of unwanted impurities
- Improvement of sand aggregate quality

Mechanism

Rotating bucket wheel

Applications

Typical Industries

Mining • Construction • Aggregate Processing
