

Bulldozer Transmission and Gear Set

This heavy-duty transmission system is designed for bulldozers. It includes durable gear components for efficient power transfer and reliable operation in demanding construction and earthmoving applications.

Product Overview

High-Performance Transmission System

This heavy-duty bulldozer transmission and gear set is engineered for robust power transfer in demanding construction and earthmoving environments. Designed for efficiency and long-term reliability, these components ensure optimal machine performance under heavy loads. It serves as a critical upgrade or replacement part for maintaining operational uptime in rugged field conditions.

Technical Specifications

Component Category

Transmission • Gear Set

Compatible Model

IT320

Primary Application

Construction, Earthmoving, Heavy-Duty
