

Burner Cap for Cooktops

This burner cap is designed for use in cooktops. It facilitates even gas distribution, which results in optimal flame control during cooking.

Product Overview

High-Performance Burner Cap

This premium burner cap is engineered for precision cooking, featuring a sophisticated design that ensures consistent gas distribution. Constructed from durable materials, it includes a dark-colored exterior with a contrasting metallic center section to withstand high heat. The perimeter hole configuration is specifically optimized for even flame control, making it an essential component for professional-grade cooktops.

Technical Details

Compatibility Features

- Round burner configuration
- Central raised section
- Perimeter flame ports

Material	Cast iron / Coated metal
Design Features	Even gas distribution, Heat resistant, Precision engineering
