

Bus Steering and Transmission System

This system is designed for use in passenger buses. It integrates both steering and transmission components.

Overview

High-Performance Bus Steering and Transmission System

This advanced steering and transmission system is engineered for heavy-duty passenger transport vehicles, ensuring reliable handling and smooth power delivery. Designed for integration with modern large-scale passenger buses, it prioritizes safety and driver ergonomics in challenging road conditions. The system represents a durable solution for fleet operators seeking high-quality components that maintain consistent performance under rigorous daily usage.

Performance

System Type	Steering System, Transmission System, Heavy-Duty
-------------	--------------------------------------------------

Vehicle Compatibility

Target Application	Large passenger buses
