

Busbar Processing Machine for Copper and Aluminum

This multi-function machine is designed for processing copper and aluminum busbars. It integrates cutting, punching, and bending functions, utilizing a hydraulic system for efficient and precise operation.

Overview

Multi-Function Busbar Processing Machine

This multi-function machine is engineered for the precise cutting, punching, and bending of copper and aluminum busbars. Built with a robust steel frame and a powerful hydraulic system, it ensures stability and high-performance operation in demanding industrial environments. Designed for efficiency, it features a user-friendly control panel and comprehensive safety mechanisms, making it an essential tool for electrical panel manufacturers and switchgear assemblers.

Capabilities

Core Functions

- Cutting
- Punching
- Bending

Compatible Materials

Copper, Aluminum

Safety & Design

Safety Features

Emergency Stop • Protective Guards

Construction

Frame Construction

Robust Steel Frame

Operation System

Hydraulic
