

Bush Hammer Plates for Concrete Surface Preparation

These bush hammer plates are designed for creating textured finishes on concrete and stone surfaces. The tool is ideal for surface preparation, coating removal, and decorative applications.

Product Overview

Professional Surface Preparation

These bush hammer plates are engineered for high-performance concrete and stone surface preparation. They are specifically designed to create textured finishes, effectively remove old coatings, and prepare surfaces for new applications. Built for both durability and efficiency, these tools minimize downtime through an easy installation and replacement system.

Technical Specifications

Primary Applications

- Concrete surface texturing
- Stone surface preparation
- Coating removal
- Decorative finishing

Usage Suitability

Professional Use • DIY Friendly

Certifications

SGS, CE, Bureau Veritas
