

Butt Welding Machine

This butt welding machine is designed for joining materials end-to-end. It features adjustable parameters for various material types and thicknesses, ensuring optimal welding performance.

Overview

Industrial Butt Welding Solution

The UNw25 is a robust and efficient welding machine engineered for precise end-to-end joining of metal components. Designed for industrial environments, it features a durable frame, pneumatic clamping mechanisms, and advanced digital controls to ensure strong, seamless, and consistent welds across various material types, including steel, aluminum, and copper alloys.

Technical Specifications

Welding Control Parameters

- Pre-pressure time
- Heating time
- Welding time
- Cooling time
- Welding current adjustment
- Tempering current
- Slope-up time
- Maintenance time

Key Machine Features

Digital Control Panel • Pneumatic Clamping • Cooling System • Safety Indicators

Performance Metrics

25 UNw

Model Capacity

Supported Materials

Steel, Aluminum, Copper Alloys
