

Butterfly Cone Fan for Ventilation

This butterfly cone fan maximizes air volume within poultry and livestock houses. Its design features a galvanized steel frame and precision-engineered fan blades.

Product Overview

High-Efficiency Ventilation Solution

The Butterfly Cone Fan is engineered for optimal air circulation in demanding industrial and agricultural environments. Designed with a specialized cone structure, it significantly enhances airflow efficiency compared to traditional box fans. This robust unit is ideal for cooling, exhaust, and ventilation applications, offering reliable performance for poultry and livestock management systems.

Performance Metrics

Airflow Efficiency Gain

15 %

Increased Air Flow

Key Features

Primary Applications

Poultry Farming, Livestock Ventilation, Industrial Cooling, Agricultural Exhaust

Construction & Design

Design Features

- Galvanized steel frame construction
- Aerodynamic cone design for reduced turbulence
- Precision-balanced fan blades
- Robust motor for reliable operation
- Protective safety grill

Speed Control

Yes
