

Butterfly Latches for Cases and Enclosures

These butterfly latches are designed for use in cases and enclosures. They are typically made of metal and feature a rotating mechanism for secure fastening.

Overview

Professional Butterfly Latches

These butterfly latches are engineered for high-durability applications in cases and enclosures. Featuring a robust rotating mechanism, they provide secure and repeatable fastening for demanding environments. Available in various sizes and designs, including options with padlock provisions, these latches are an essential hardware solution for equipment protection.
