

Bypass Loppers with Compound Lever System

These professional-grade bypass loppers are designed for clean and efficient cuts on branches and stems. They feature high-carbon steel blades for lasting sharpness and a compound lever system for increased cutting power.

Product Overview

Professional Bypass Loppers

These bypass loppers are engineered for professional-grade performance in gardens and orchards. Featuring a compound lever system, they provide significantly increased cutting power for efficient, clean cuts on branches and stems. The lightweight aluminum construction reduces operator fatigue, while the high-carbon steel blades ensure long-lasting sharpness for demanding pruning tasks.

Technical Specifications

Blade Material	High-carbon steel
Handle Material	Aluminum
Mechanism	Compound lever system

Features

Key Features

- Ergonomic grips for comfort
- Lightweight design
- High-carbon steel blades
- Compound lever power assist

Applications

Ideal For	Tree Pruning, Shrub Maintenance, Orchard Management, Woody Plant Care
