

Bypass Loppers with Hardened Steel Blades

These bypass loppers are designed for efficient pruning and cutting in gardening and landscaping. They feature hardened steel blades for lasting sharpness and long handles for increased leverage.

Product Overview

Professional Bypass Loppers

These professional-grade bypass loppers are engineered for efficient and clean cuts in demanding gardening and landscaping applications. Featuring hardened steel blades, they ensure lasting sharpness and durability for consistent performance. The bypass cutting action is specifically designed to minimize damage to live stems, while the ergonomic, long-handle design provides the leverage needed for extended use with reduced fatigue.

Technical Specifications

Cutting Action	Bypass
Blade Material	Hardened Steel
Intended Use	Gardening, Landscaping, Professional

Design Features

Key Features

- Ergonomic grips for comfort
- High-leverage long handles
- Hardened steel blades for durability
- Bypass action for clean cuts
