

Bypass Loppers with High-Carbon Steel Blades

These bypass loppers are designed for efficient cutting of branches and stems. They feature high-carbon steel blades for lasting sharpness and long handles for increased leverage.

Product Overview

Professional Bypass Loppers

These heavy-duty bypass loppers are engineered for efficient cutting of branches and stems in demanding garden and landscape environments. Featuring high-carbon steel blades, the tool ensures lasting sharpness and precise, clean cuts through a bypass cutting action. Designed with long handles for increased leverage and reach, these loppers offer the durability required for rigorous, professional-grade pruning tasks.

Technical Specifications

Blade Material	High-Carbon Steel
Cutting Action	Bypass
Best For	Tree Pruning, Shrub Maintenance, Bush Trimming

Design Features

Construction	Heavy-Duty • Durable
Handle Advantage	Extended length for maximum leverage and reach
