

C6X Series Jaw Crusher

The C6X Jaw Crusher is designed for high-performance primary crushing in mining and recycling. This robust machine features a heavy-duty frame, optimized crushing chamber, and advanced hydraulic adjustment system.

Overview

High-Performance Primary Crushing

The C6X Series Jaw Crusher is engineered for high-performance primary crushing in mining, quarrying, and recycling applications. It features an optimized crushing cavity and motion trail, designed to handle hard and abrasive materials with superior efficiency. With a focus on durability and reduced maintenance, this machine offers a robust solution for operations requiring consistent throughput and reliability.

Performance Metrics

Capacity Range

160 TPH

Minimum Capacity

1510 TPH

Maximum Capacity

Max Input Size

1280 mm

Technical Specifications

Construction Features

- High-quality casting movable jaw body
- Optimized crushing chamber geometry
- Heavy-duty frame structure
- Hydraulic adjustment system for discharge size control

Suitable Materials

Granite, Marble, Basalt, Limestone, Quartz, Pebble, Copper Ore, Iron Ore

Lubrication System

Centralized grease lubrication (Manual or Automatic configuration available)
