

Cabinet HVAC Unit

This cabinet HVAC unit is designed for climate control in buildings. It integrates a blower, heat exchanger, and cooling coil within its structure.

Overview

Cabinet-Type HVAC Unit

This cabinet-type heating, ventilation, and air conditioning unit is engineered for efficient climate control in residential or commercial environments. Featuring a robust, metallic gray exterior, the unit is designed for durability and reliable performance. Its integrated design houses essential components like a blower and heat exchanger, making it a versatile solution for various installation requirements.

Design & Construction

Exterior Finish	Metallic gray
Airflow Design	Louvered panel
Installation Suitability	Indoor, Outdoor

Technical Features

Integrated Components

- Blower
- Heat exchanger
- Cooling coil

System Type	Self-contained cabinet unit
