

Cabinet Water Softener

This cabinet water softener features a space-saving design, integrating the brine and resin tanks. It utilizes an electronic control valve to efficiently reduce hardness minerals, improving water quality for various household applications.

Product Overview

Continuous Softening Performance

The RL-R100M is an advanced automatic water softener engineered for continuous water supply. Featuring a unique three-tank configuration where two tanks operate in series, the system ensures uninterrupted soft water flow even during resin regeneration cycles. Designed for efficiency, this unit effectively treats water with hardness levels of 16 mol/L or higher, making it ideal for demanding water quality requirements.

Technical Specifications

Softened Water Output

1 m3/h

Flow Rate per Tank

Model Identifier	RL-R100M
Cabinet Dimensions	588mm x 403mm x 524mm

Connections & Fittings

Water Inlet	3/4" Male
Water Outlet	3/4" Male
Drain Pipe Diameter	14 mm

System Features

Key Capabilities	Automatic Regeneration, Continuous Supply, Three-Tank Design, Series Operation
