Product Overview

Compact Cabinet Water Softening Solution

This cabinet-style water softener provides efficient hardness removal for household applications, effectively reducing scale buildup to improve overall water quality. It utilizes an advanced ion exchange process housed within a space-saving cabinet design, making it suitable for compact installation environments. The unit ensures optimal performance through intelligent features such as an automatic regeneration cycle and a dedicated warning system for salt depletion.

Performance Metrics

Core Performance Data

600 L/h

Rated Flow Rate

5500 L

Softened Water per Cycle

Technical Specifications

Drive Mode	Power adapter
Power Supply	AC220V
Temperature Range	5 ~70
Water Source Compatibility	Tap water
Dimensions	608mm x 321mm x 178mm

Control & Safety

Control Features

- Automatic 2 AM regeneration timing
- Regeneration trigger based on cycle count
- Salt level monitoring with warning signal
- Digital control panel for performance monitoring
