

Cable and Wire Anchor Clamp

This anchor clamp is designed for securing wires and cables in electrical power distribution. It is constructed from galvanized steel for corrosion resistance and provides reliable support and strain relief for overhead lines.

Product Overview

High-Performance Anchor Clamp

This heavy-duty anchor clamp is engineered for secure wire and cable anchoring in electrical power transmission and distribution systems. Constructed from high-strength aluminium alloy, nylon with fiber glass, and stainless steel, it offers exceptional mechanical stability and climatic resistance. Designed for efficiency, the clamp features a tool-free installation mechanism and ensures double insulation of the neutral core to prevent sheath damage.

Technical Specifications

Compliance Standard

NFC 33-041

Materials

High strength aluminium alloy, Nylon plus fiber glass, Stainless steel

Key Features

Installation Features

- Tool-free installation
- Double insulation of neutral core
- Reduced dimensions for easier handling
- Easy locking stainless steel bail
