

Cable Gland with Locknut

This cable gland provides a secure and sealed connection for cables entering enclosures. It protects against environmental factors and ensures reliable performance with its robust housing and sealing components.

Overview

Secure Cable Management Solution

This cable gland with locknut is engineered for secure and reliable cable entry into various enclosures. It features a robust housing and integrated sealing components that provide essential protection against dust, dirt, and moisture. Designed for versatility, it offers strain relief and ensures a sealed connection to maintain the integrity of your electrical installations.
