

Cable Management Rail System for Network Cables

This cable management rail system organizes and routes network cables in server racks and data centers. Its modular design allows customization and expansion for different cable densities.

Product Overview

Professional Cable Management Solution

This cable management rail system is engineered to optimize network infrastructure within server racks and data centers. By providing a structured horizontal routing path, it effectively prevents cable tangling and promotes better airflow for critical hardware. Its modular design allows for seamless customization and expansion, making it adaptable to varying cable densities and specific installation requirements.

Technical Details

Color Scheme

Black Base • Beige Guides

Key Features

- Horizontal cable routing
- Adjustable cable guides
- Modular design
- Improved airflow management

Construction Materials

Metal Base, Durable Guides

Application

Primary Use Case

Server racks and data center infrastructure
