

Cane Harvesting Machete with Blade Tip

This machete features a blade front-end to the tip at a blade section between the back-end and the shank, making it more secure and difficult to damage the operator. The front end of the knife blade is designed to facilitate the harvesting of sugar cane and improve work efficiency.

Product Overview

Designed for Efficient Harvesting

This specialized cane harvesting machete features a unique blade design with a reinforced tip section. The geometry between the back-end and the shank is engineered to enhance operator safety while minimizing the risk of damage during intensive use. Specifically crafted for sugar cane harvesting, the blade's front end facilitates smoother cutting, significantly improving overall work efficiency in the field.
