

Cap Injection Mould

This injection mould is designed for producing caps for beverages, oils, and lubricants. It features a multi-cavity design and advanced cooling system for efficient and consistent production.

Overview

High-Efficiency Cap Injection Mould

This precision-engineered injection mould is designed specifically for the high-volume manufacturing of plastic caps. Featuring a robust multi-cavity design, it ensures consistent part quality and dimensional stability through advanced cooling channels and precise alignment mechanisms. Built with high-grade steel components, this mould offers exceptional durability and longevity for demanding production environments.

Technical Specifications

Mould Base Material	45# + P20
Core & Cavity Material	S136 + H13

Performance Metrics

Mould Life

1000000 shots

Shot Life

Runner System	Hot Runner, Cold Runner
---------------	-------------------------

Logistics

Packaging	Wooden cases
