

# Car Alarm Upgrade System for Original Transmitters

This car alarm system upgrades vehicle security using the original car's existing remote control. The system includes a control unit, siren, LED indicator, and wiring for installation, offering remote arming/disarming and shock/door monitoring.

## Overview

### Seamless Security Integration

This upgrade car alarm system is specifically designed to work in harmony with your vehicle's original factory transmitters. By integrating directly with existing remote controls, it adds a robust layer of protection against theft without requiring additional key fobs. The complete kit includes the main control unit, siren, indicator LED, and all necessary wiring for a professional installation experience.
