

Car Electronics Manufacturing Machine

This machine is designed for forming electronic components used in car electronics manufacturing. It ensures precise shaping and preparation of components for efficient assembly.

Overview

Industrial Manufacturing Solution

This industrial machinery is specifically designed for the precise manufacturing and processing of car electronic components. Featuring a robust, horizontally oriented structure, the machine is engineered for reliability and consistent performance in demanding production environments. With integrated safety guards and transparent observation windows, it ensures both operator safety and clear visibility of the internal manufacturing mechanisms.

Technical Details

Safety Features

Safety Guard • Observation Window

Model Designation	60me
Primary Application	Car Electronics, Industrial Manufacturing, Component Processing
